

Case Study

Marle Place

Marle Place was an old, period house that was in need of major renovation, we was asked to install a insulated render system by the Architects, Back 2 Front Design and worked closely with both B2F and the client to maintain its original features.

The top section of the house and the large new extension to the rear where to have 50mm thick Kingspan Kooltherm K5 insulation board finished with Jub nanoxil self cleaning render in a bespoke colour.

The major details on the site where the reconstructed tower and the new conservatories that needed to be insulated before they was installed but also making sure all the leadwork was covered and water tight.

The client was most impressed how we worked with the builders on site in an almost design and build project that was a huge part of the renovation.

The Coloured Render Co Ltd are approved installers of many external insulation systems available in the UK and Ireland, please contact us to see what system is suitable for your house.
