

Case Study

Fingest Lane

Fingest lane was an old bungalow on the Chilterns that badly needed some form of insulation to improve its thermal efficiency. We were asked to look at the works after speaking to the client at a trade show.

The client had been advised to have a rail system attached to the insulation but we advised that a direct bond could be achieved and save cost.

Our scope of works was to dub out the existing stone areas and install 60mm thick Kingspan Kooltherm K5 with a Jub silicone render to withstand the elements in the very exposed area.

We worked closely with the main contractor to achieve the finish required and make it look right as there were many different levels to work from on the old and new part of the building.

The client was so impressed with the finish that he asked us to render his garage and retaining walls to match.

The Coloured Render Co Ltd are approved installers of many external insulation systems available in the UK and Ireland, please contact us to see what system is suitable for your house.
